The 11/24/63 Belmont to Tolson memo states that the FBI had decided that Oswald was the killer-and for political reasons, not factual evidence, none of which is listed. The political "facts" are not without question. Like Oswald was never "an active member of the FPCC."

This decision was made prior to examination of the medical evidence, without an FBI effort to obtain other and essential evidence, like the curbstone.

The memo does not even mention the Laboratory or its work.
